Updating the firmware
340 prepASH

Downloading and unpacking

1. Download the actual firmware package, available in the download section of our website http://www.precisa.com.
   The package comes as zip folder named "340prepASH_Firmware-Package_Vx-x-x.zip", e.g. "340prepASH_Firmware-Package_V1-0-4.zip".

2. For unpacking just doubleclick the downloaded zip folder and let the operating system, Windows 7 or higher, do this automatically. **Important: Do NOT unzip by means of "WinZip" or similar applications; the files could be damaged and unusable!**

   The unzipped folder consists of:

   prepASH_updater: Folder with file "signature.txt" and Zip-File "prepASH_updater.zip".
   Installation instructions: This file, named "Installation_Instruction.pdf".
   Release notes: Text file named "ReleaseNotes_Vx-x-x.pdf" listing all release notes about this firmware version.

Updating

1. Copy the folder "prepASH_updater" onto an empty USB stick.
2. Insert the USB stick into the prepASH terminal.
3. Login with a user that has the necessary permissions to update the prepASH.
4. Navigate to the menu <Settings><About device><Software> and press the <Update> button.
5. Once the process is complete, the application will restart automatically.
